

UX Design

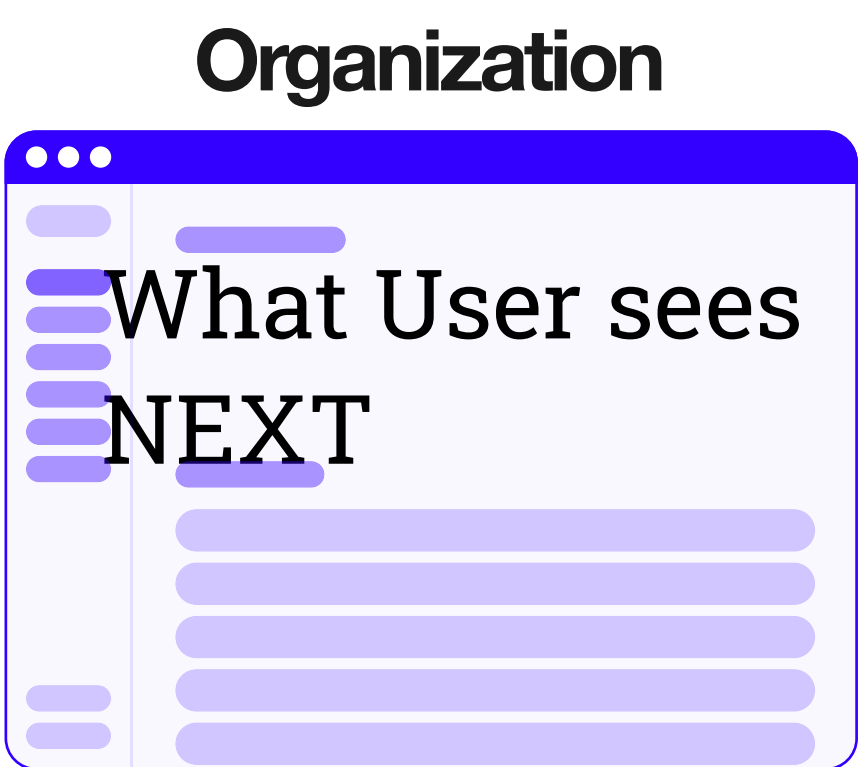

Userflow

zoom in's and
slide aways will be
the default animations
for web page entrance and
exit

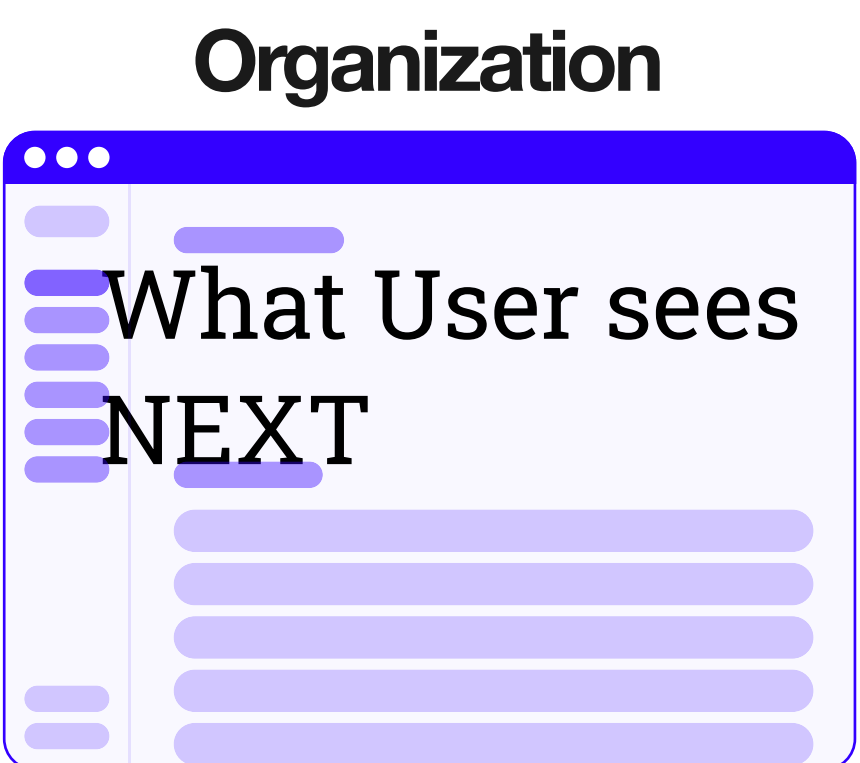

Auth page zooms in

User gets error redirect or
pages slides away and
index zooms in

Index provides option
to load last SRS report
or make a new one

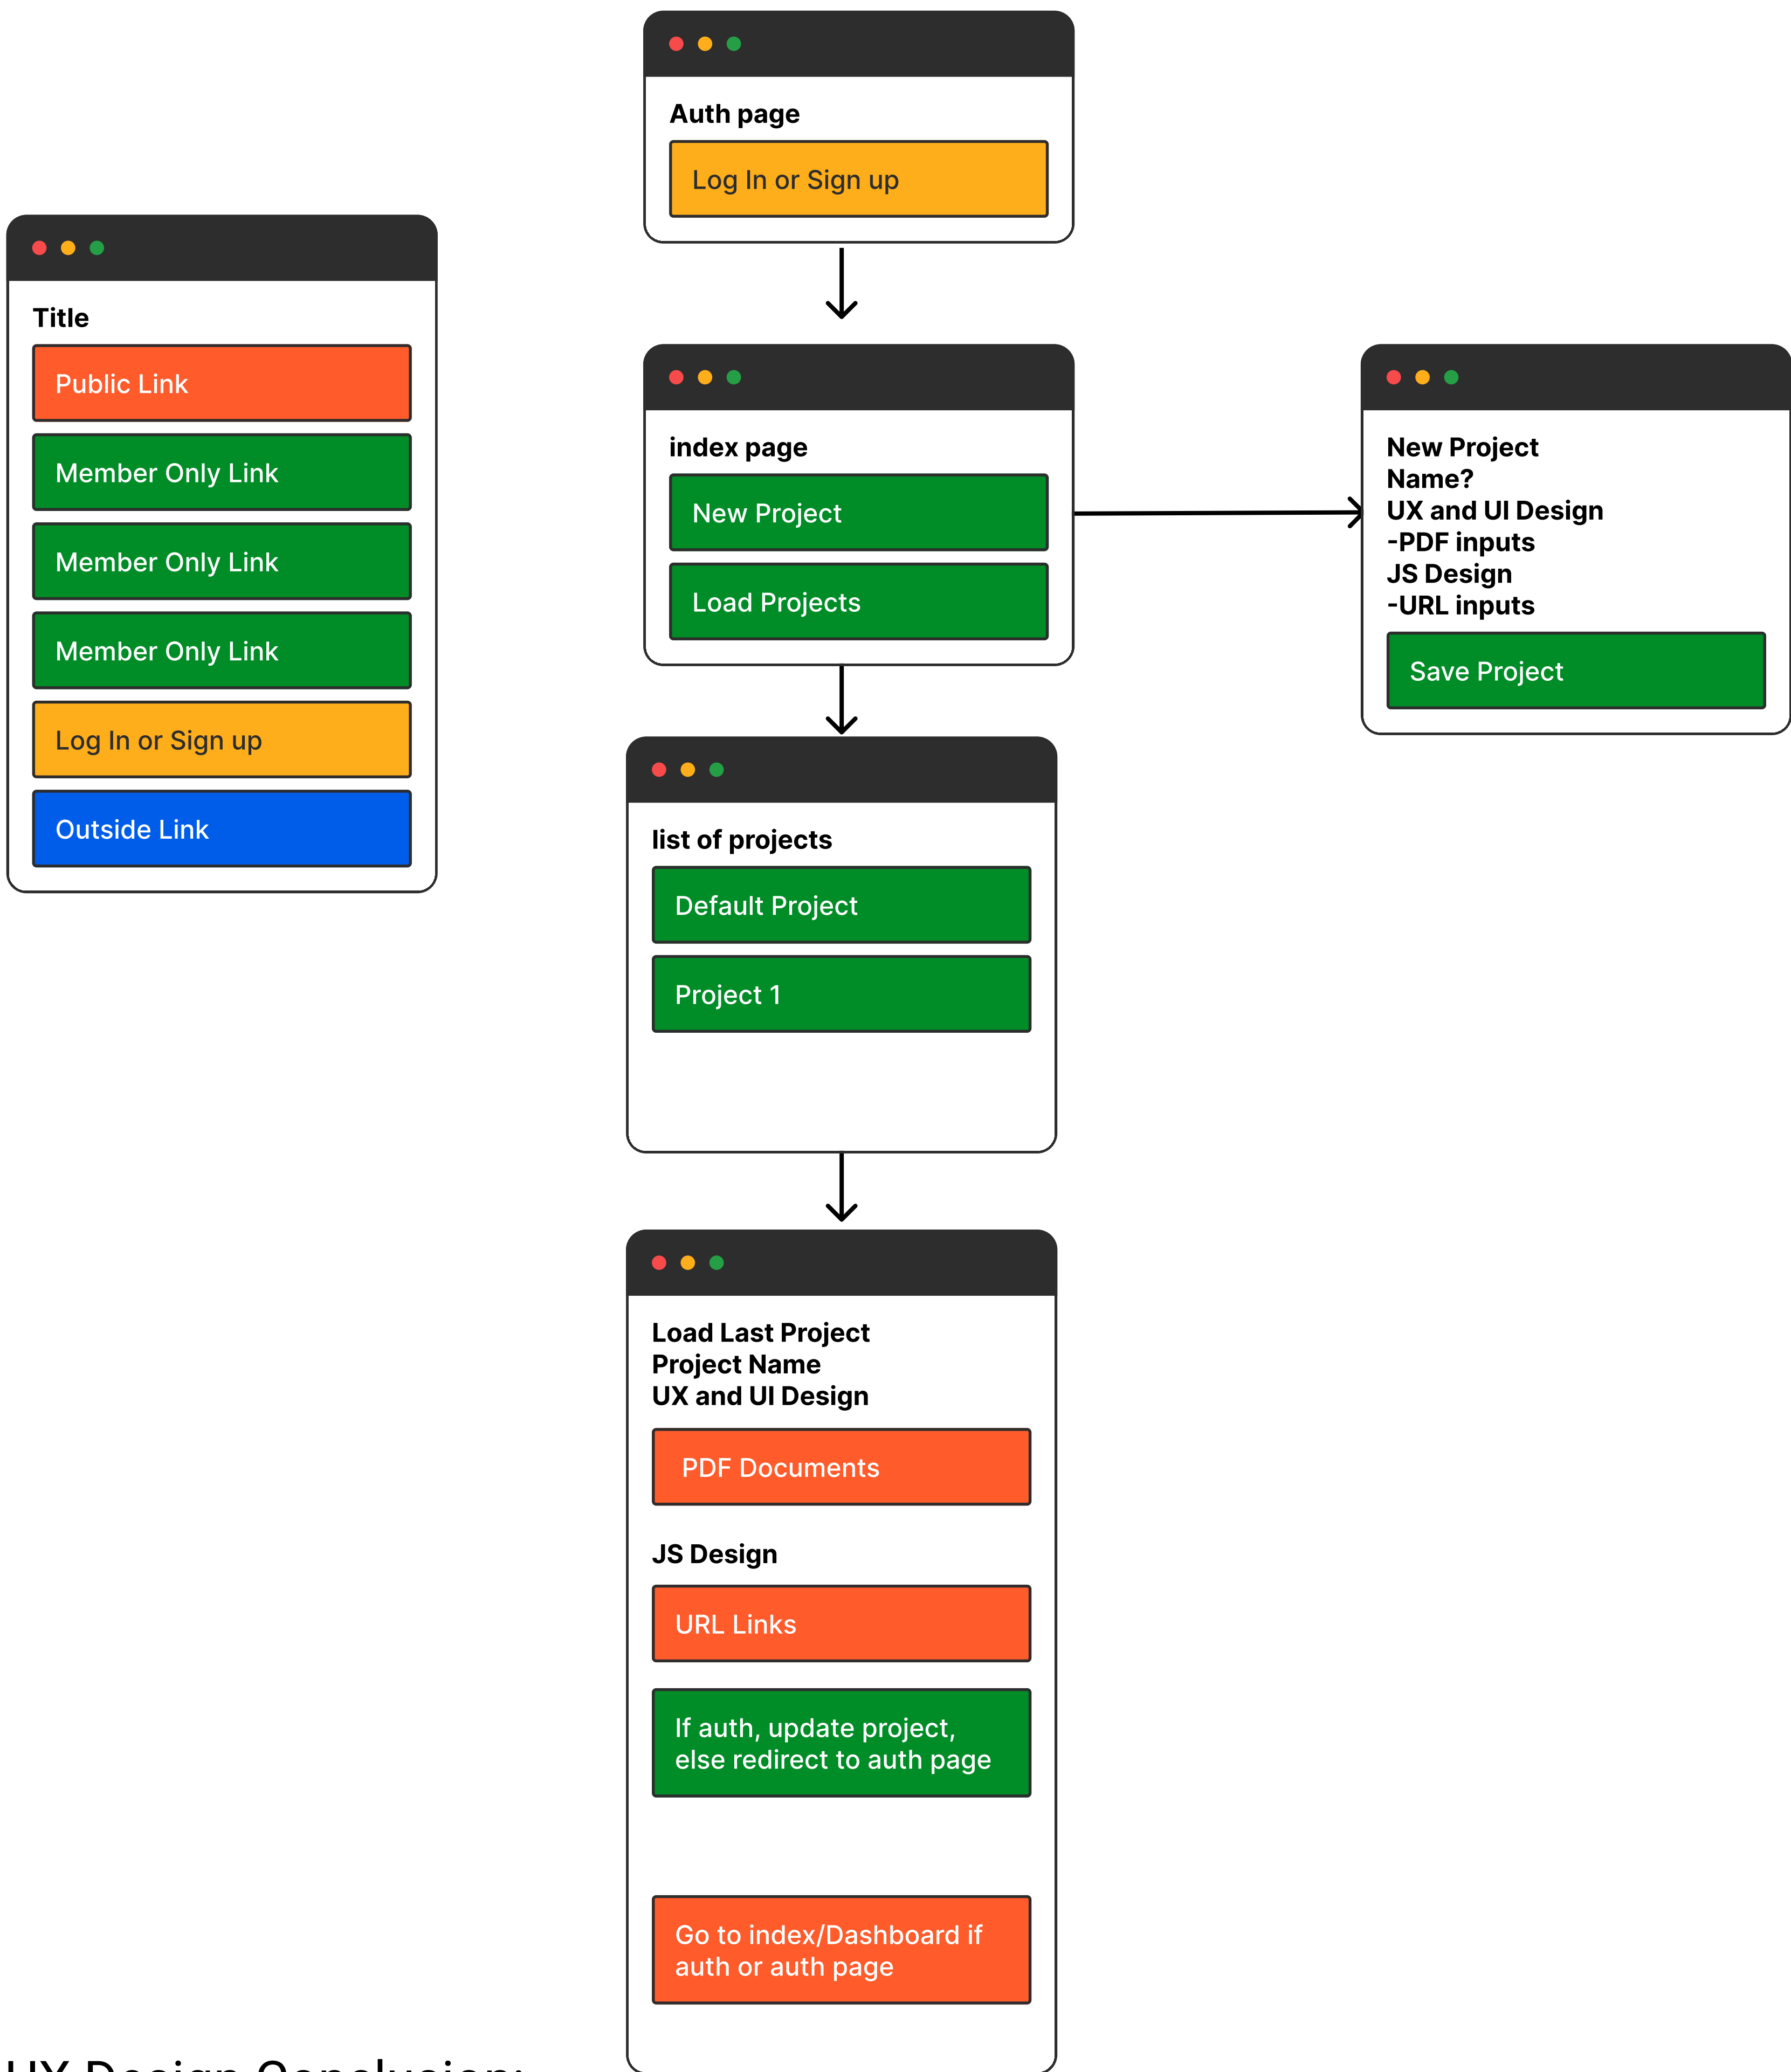

When making a new one,
input page appears, to allow
user pdfs and urls

when pressing save,
the app saves the data as
an object through remote
storage then routes to
the load last page

The load last page shows only
3 (max) of projects to be
managed

Sitemap

UX Design Conclusion:

The developer will see the options of what they have to put in the SRS Saver app, as their default state will be all inputs incomplete unless they click the check button to show, started working on, or complete, with the input options.

Their data for the project will be editable, readable and deletable
